

Rohith B

Coimbatore, India — +91 90801 09768 — LinkedIn — GitHub — rohithbhojan@gmail.com

Summary

Motivated AI/ML and Full Stack Developer with experience building AI-powered web applications using Python, JavaScript, React, Node.js, and MongoDB. Passionate about developing scalable AI-driven solutions for real-world problems.

Skills

Languages: Python, Java

Frontend: HTML, CSS, JavaScript, React.js

Backend: Node.js, Flask, REST API

Databases: MySQL, MongoDB

Frameworks: Scikit-learn, TensorFlow, PyTorch, RAG, Fast API

Tools: VS Code, Jupyter Notebook, GitHub

Projects

Automated Cyber Triage System

- Built a real-time automated anomaly detection system to detect and respond to DoS and DDoS attacks by continuously monitoring network traffic and identifying abnormal behavior in real time.
- Implemented mechanisms to automatically block malicious IP addresses, reducing attack impact and minimizing the need for manual intervention.
- Included logging and analysis features to track security incidents and help understand attack patterns for better future prevention

Adaptive Memory System for AI Agents

- Designed a long-term memory system that allows AI agents to store and retrieve past information, enabling better context awareness across multiple tasks.
- Improved decision-making by prioritizing relevant past data, helping agents perform tasks more efficiently over extended periods.
- Supported autonomous task execution and long-term workflows, enhancing the adaptability and intelligence of AI agents.

Automated Expense Tracker from Receipts

Present

- Developed a system to automatically extract expense-related information from receipt images, reducing the need for manual data entry.
- Converted unstructured receipt text into structured expense records, making data easier to store, search, and analyze.
- Helped individuals and small businesses track expenses more accurately and efficiently through automation.

Experience

Vibrace Technologies — Web Developer Intern

Jun 2025

- Built a web app for translating languages for human voices using HTML, CSS, JS, Python and Whisper.

PrivacyWeave Technologies — AI/ML Intern

Dec 2025

- Built a web application that analyzes user complaints about data privacy and automatically checks them against India's DPDP Act 2023, identifying which rules were violated and displaying applicable penalties
- Developed the backend using Python with FastAPI to process complaints and map them to regulatory sections, and created a frontend interface using React where users can input complaints and view results.

Education

Sri Ramakrishna Engineering College

2023 – 2027

B.Tech – Artificial Intelligence & Data Science

CGPA: 6.88 / 10

Vidya Vikasini Matric Hr. Sec School

HSC – 84.33%

Certifications

- Retrieval Augmented Generation with LangChain — IBM SkillBuild
- Generative AI Unleashing — IBM SkillBuild
- OpenAI GPT-3 for Developers — IBM SkillBuild

Achievements

- 2nd Place — AVINYA'25 36-hour Hackathon, MVJ College of Engineering
- Project: Automated Cyber Triage System for Real-Time DoS/DDoS Attack Mitigation.

Languages

English, Tamil
