

Summary

Motivated and detail-oriented professional actively seeking opportunities to apply existing knowledge and contribute to growth-oriented organizations, delivering value through strong accuracy, efficiency, and a commitment to continuous improvement.

Skills

Education

Sri Ramakrishna Engineering College

B.tech-Artificial Intelligence andData Science, CGPA: 6.88/10

Coimbatore

Vidya Vikasini Matric.Hr.Sec School

HSC

2023

Percentage: 84.33%

Coimbatore

Experience

Vibrace Technologies

Intern Role: Web Developer

Jun 2025 - Jun 2025

Coimbatore

PrivacyWeave Technologies

Intern Role: AI ML

Dec 2025 - Dec 2025

Coimbatore

Awards

- Secured 2nd place and awarded with a cash price of Rs.10,000 in 30 hours Hack-a-thon conducted by MVJ College of Engineering, Bangalore for the project “Automated Cyber Triage System for Real-Time DoS and DDoS Attack Mitigation”

Certifications

- Retrieval Augmented Generation with LangChain
- Journey to Cloud
- Generative AI Unleashing
- Introduction to OpenAI GPT Models
- OpenAI Generative Pre- trained Transformer 3(GPT-3) for Developers
- Introduction to Robotic Process Automation
- Computer Vision 101
- AWS Certified

Projects

- **NetworkTrafficAnomaly Detection using Machine Learning:** Developed a real-time anomaly detection system for network traffic using Isolation Forest and LSTM Auto encoder. Implemented data pre- processing and feature extraction on captured traffic, enabling accurate identification of abnormal patterns without relying on predefined signatures. Built an interactive dashboard using Streamlit for live monitoring and visualization. Utilized Python, scikit-learn, TensorFlow, pandas, and PyShark for development and analysis.
- **Automated Cyber Triage System for Real-Time DoS and DDoS Attack Mitigation:** Developed a cost-effective, open-source tool for detecting and mitigating DoS, DDoS, APDoS, and DRDoS attacks in real time using Zeek, machine learning, and automated firewall rules. Enabled deep packet inspection, real-time IP blocking, and detailed logging to enhance network security and resilience.
- **AI Auto Compliance Mapper:** Built an intelligent legal assistance platform that allows users to describe real-world legal or compliance issues in natural language. The application processes the input using an LLM to identify applicable laws and regulations, summarizes them in simple terms, and provides practical guidance on what actions to take. The project focuses on improving legal accessibility by reducing complex legal language into easy-to-understand explanations, making compliance easier for common users.
- **Adaptive Memory System for AI Scheduling Agents/Present:** Developing an adaptive memory system for AI agents handling long- running scheduling workflows. It uses reinforcement learning to intelligently recall past context during callbacks, improving task continuity and efficiency.
